## **Quantum Net**

Qnet now has four options for displaying price plans and an option for limiting order quantity for an item without a price plan.

### Input Quantity fields used with Price Breaks

With the following options the price plans are created on the Prices tab of Item Maintenance. The selection for the display option is set on the Input Qty drop-down on the Qnet tab.

*Allow any Quantity* – open input field is displayed on Qnet. The price for the item is determined by the order amount. The price field will display “Price Breaks”, the user can mouse over the link to display the price breaks for the item. The user will enter the order quantity into the open field then click on Add to Cart. If no quantity is entered into the quantity field, a quantity of 1 will be added to the cart.

*Only Price-Break Quantities* – a grid displays only the quantities from the price break table. The price field will display as “Click for Pricing”, the user can mouse over the link to display the price breaks for the item. In the item detail screen a grid will display the price break quantity, per UOM price and the extended value. The user must choose from one of the price breaks to add the item to the shopping cart.

*\*Quantity table w/o unit price* – displays as the Only Price-Break Quantities table except the per-UOM price row is suppressed.

*\*Qty from drop-down* – displays as a drop-down field. The price field will display “Price Breaks”, the user can mouse over the link to display the price breaks for the item. In the item detail screen the drop-down field will display the price break quantity and the extended value. The user must choose from one of the price breaks to add the item to the shopping cart.

### Quantity selection without Price Breaks

*Input Quantities* – displays as a table, limits the user from ordering any quantity that is not listed in the Input Quantities tab. The price displayed will be the latest client price extended out to the order amount. This option is set in item maintenance on the Qnet tab. Click on the Input Quantities tab; use the grid to enter the order amounts. The user will only be allowed to choose the quantity to order from a table.

\* New option, currently on Sub Category view only.
