

Customize Your Desktop Shortcuts

We have a new feature that you will find on the e-Quantum desktop. We are all used to seeing the 9 buttons on the left, but now you can customize those buttons to fit your Job.

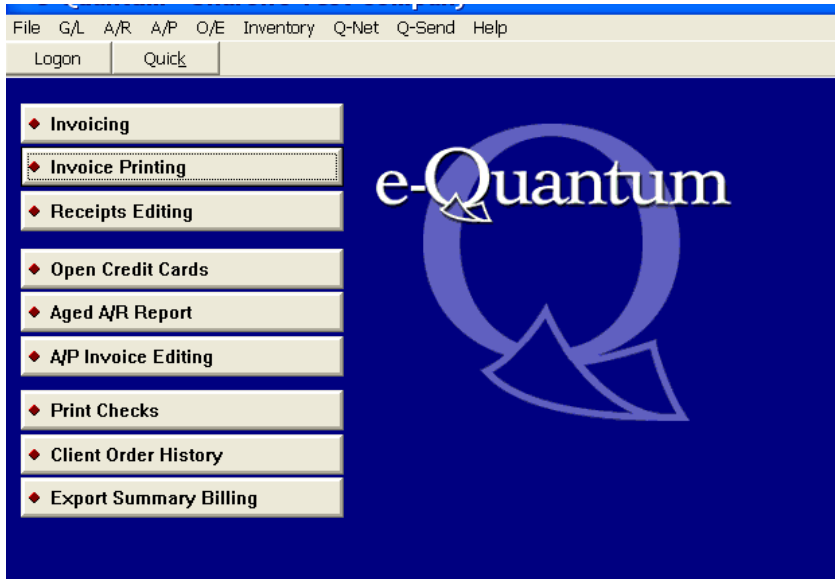

Put the top 9 places you use the most at your fingertips. Pick the button you want to change and right click.

Select Change this button and you have ability to pick a function or a report you want at your fingertips. Just click on the module and drill down to the function or report you want and select.

This is a sample of a customized desktop.

For those who like keyboard commands you can use Alt 1 to 9 to select the button and begin the function. Button number 1 is at the top.
